Subject: FFS Model Inputs

Alice:

As a follow-up to our December 20 email exchange. I am asking on behalf of the Group the following specific information related to the FFS Modeling scenarios. It is understood that EPA Modeling Team may not be able to provide the actual input files at this time, but we are requesting the information that you are using to create these files.

For the dredge/cap and the full dredge alternatives, the CPG requests the following information:

- Dredging and/or capping locations in the format of model cell (I,J) and/or GIS shapefile
- Sequence of dredging/capping at each location
- The start date of the remediation for each year
- Depth of dredging for each location
- Thickness of capping for each location
- Type of cap used at each location
- Length of dredging/capping in days for each cell
- Average concentration for all chemicals below the dredge prism for each cell
- % mass of solid and chemical release due to dredging/resuspension
- Post-dredging/capping concentrations for all chemicals in each cell

The CPG would like to receive this information as soon as possible.

Please contact me with any questions.

Happy New Year

R/
Rob
